Universal Handle Kit Press Release

**FOR IMMEDIATE RELEASE****Flushmate® Universal Handle Kit Improves  
Pressure-Assisted Flushing Performance***One-size-fits-all kit is an upgrade for Flushmate-equipped toilets*

NEW HUDSON, MI (June 29, 2022) – [Flushmate®](#), the leader in pressure-assisted toilet technology, announced its new Universal Handle Kit, designed to allow customers to upgrade their handle and linkage system for pressure-assisted toilets.

An improved design over the existing handle and linkage system used on pressure-assisted toilets, the Universal Handle Kit is compatible with both right- and left-handed applications for the Flushmate 503, 503H (produced after Feb. 29, 2008), and 504 Series systems.

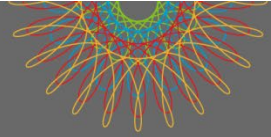

“At Flushmate, we’re constantly working to improve our pressure-assist technology to create an enhanced experience for our customers,” said Bernard Peters, President, Flushmate. “The new Universal Handle Kit is an innovative and easy-to-install solution to eliminate common issues and offer smooth flush performance for customers.”

After installed, the Universal Handle Kit can activate the flush cycle with less than three pounds of force, offering a smooth flushing experience, eliminating loose handles, and ensuring a full handle return after every flush. Installation can be completed in just minutes using a screwdriver and wrench. The sealed cable eliminates any binding, resulting in a smoother flush.

The kit is designed for use in both residential and light commercial applications, including healthcare, offices, hospitality, education, retail, and more and is covered by a one-year limited warranty.

The kit comes with a new lever frame for Flushmate-equipped toilets and handles available in various finishes to match any type of project style, including chrome, satin nickel, polished nickel, and polished brass. It works with Flushmate-equipped pressure-assisted toilets from well-known brands such as Sloan®, Kohler®, Gerber®, Mansfield®, Western Pottery®, and others.

Leading toilet brands around the world are powered by Flushmate pressure-assisted technology for single flush performance and water savings. On average, Flushmate models can consume 20 to 38% less water than other 1.6 gpf gravity toilets.

Visit [Flushmate's website](#) to learn more about the Universal Handle Kit and additional information on the benefits of touch-free options and pressure-assisted technology.

**About Flushmate®**

[Flushmate®](#), headquartered in New Hudson, Michigan, manufactures Flushmate Operating Systems at its state-of-the-art design and manufacturing facility, which is ISO-17025 certified. As the pioneer in pressure-assisted technology, Flushmate has been delivering water saving solutions without sacrificing performance for over 35 years. Leading toilet brands such as Sloan®, Kohler®, Gerber®, Mansfield®, Western Pottery®, and others use Flushmate pressure-assisted technology for single-flush performance and water savings. Flushmate is the leading supplier of pressure assist technology to toilet manufacturers on three continents with key markets including commercial, residential, hospitality, multi-family, and more using Flushmate.
