FLUSHMATE®

Pro Pocket Guide

A resource for Flushmate equipped toilets, replacement systems, parts, tools, and accessories.

Now available as the world's first ultra-high efficiency 0.75 gpf

Contents

Whether specifying new toilets with Flushmate® Systems or locating replacement vessels or parts, this guide provides the complete list of brands and models that offer Flushmate pressure-assist technology.

Every drop counts

Leading toilet brands around the world are powered by Flushmate pressure-assisted technology for single flush performance and water-savings.

Water savings for life
The flush volume will never decrease which means water savings are sustained for the life of the fixture.

53% less water*
Flushmate models can consume from 20% (1.28 gpf) and 53% (0.75 gpf) less water than 1.6 gpf gravity toilets on average.

Fewer double flushes**
70 gallon per minute peak flow of Flushmate pressure-assisted technology clears the bowl on the first flush.

Based on internal testing

**Flushmate uses ANSI Standards for bowl clearing and drainline carry with miso testing*

> **IMPORTANT**
> Only the toilet models listed in this guide are compatible with Flushmate Systems. See pages 6-13 for all current toilets manufactured to include Flushmate pressure-assisted technology.

Flushmate® Systems

Flushmate pressure-assisted toilets effectively eliminate waste and conserve water through an innovative flushing technology that outperforms traditional gravity toilets. There are four options to choose from, defined by flush volume (water consumption):

503UH Series Flushmate III
0.75 gpf / 2 piece toilets
- UHET (Ultra-high efficiency toilet)
- Most water conserving
- WaterSense certified

504 Series Flushmate IV
1.0 gpf / 1 & 2 piece toilets
- UHET (Ultra-high efficiency toilet)
- Water conserving
- WaterSense certified

503H Series Flushmate III
1.28 gpf / 2 piece toilets
- HET (High-efficiency toilet)
- Water conserving
- WaterSense certified

503 Series Flushmate III
1.6 gpf / 1 & 2 piece toilets
- ULF (Ultra-low flow)
- Enhanced flushing performance
- For spaces with limited water pressure

Commercial A 10-story office building with 1,000 occupants could save 1.2 million gallons of water and up to $10,000 per year by switching to WaterSense toilets.

Residential The average family can reduce water used for toilets by 20 to 60 percent by switching to WaterSense models.

I-Flush™

I-Flush enables touchless, electronic sensor operation of existing Flushmate® units.

1 ON-WALL SENSOR

The wall sensor offers infrared object detection, wave, and 24 hour automatic flush activation providing hygienic, hands-free flushing performance.

2 FLUSH MODULE

The flush module attaches to the top of the Flushmate 503, 503H, 503UH, or 504 Series systems with four screws.

3 OVERRIDE BUTTON

Immediate flushing is available with a sleek override button that easily replaces your traditional flush handle.

Hands-free operations for hygienic convenience.

Introducing I-Flush™, a sleek and stylish solution for modern restrooms and the latest innovation in the company's line of pressure-assisted restroom products. Packed with enhancements, the I-Flush offers improved touchless flushing operations to help reduce touch points and the spread of bacteria, helps diminish recurring odors, and highlights the convenience of automatic flushing.

Design features

- Superior flushing with proven Infrared Object Lock Technology
- Easy to install on-wall sensor system
- Ideal for new 0.75, 1.0, 1.28, or 1.6 Flushmate systems or retrofitting to select Flushmate models
- Automatic calibration, flush delay (3 or 7 second), and 24-hour flush cycle
- Optional "hand wave only" actuation
- LED indication on detection and when battery is low
- Sealed battery compartment
- Sensor trim available in chrome or white

Features and benefits

- Battery-activated
- ADA compliant
- Infrared sensor technology ensures a complete flush after each use
- Adjustable sensor settings
- Ideal for applications where physical flushing is a concern
- Helps reduce odors
- 3 year expected battery life
- 1 year limited warranty

Flushmate® Replacement Systems

① Identify Toilet Type

One-piece or two-piece.

② Identify Your Model and Serial Number

The model and serial number are located on the top portion of the label adhered to the top of the Flushmate System. The middle characters (up to 5) in the serial number determine the replacement part needed.

XXXXXX - F3HG3 - XXXX

③ Locate your Serial Number

Search the lists below for your serial number. The replacement part number is listed in bold above your serial number.

In example on the right you would replace your model (that has serial number F3HG3) with replacement part M-101526-F3H3

Flushmate Upgrade Kit

One-kit Wonder

Replace your pressure-assisted system with Flushmate®.

Complete Flushmate System

Includes the Flushmate III, 1.6 gpf system for two-piece toilets.

Universal handle replacement

The new universal handle is designed for mounting on either left-handle or right-handle toilets.

Nuts and bolts

Kit includes locknuts, gaskets, and necessary tools.

Kit Includes

1. Frame and Lever 2. Handle 3. Bushing 4. Nut 5. Spacer
6. Screws (4) 7. Cassette 8. Cable with Barrel End and Disposable Cap
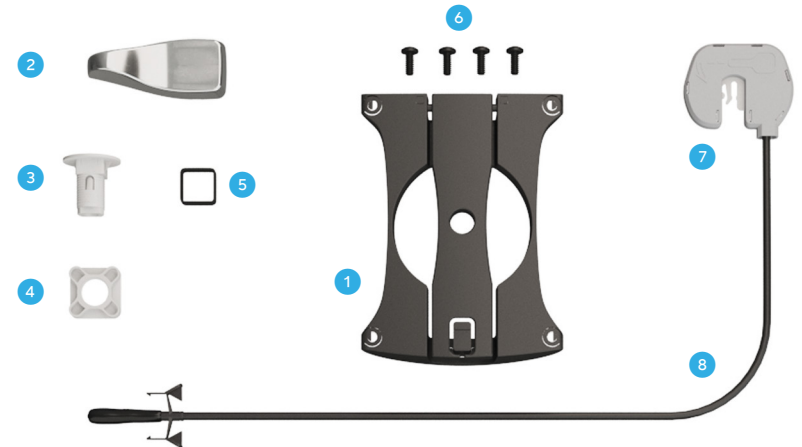

Prior to Installation

Before removing existing handle, note its orientation. The new handle should be installed facing the same direction.

If you have a flush rod, clips, and screws, remove them before you start. Be careful not to drop parts into the tank.

The existing and new nut provided are left-hand thread (clockwise to loosen and counter-clockwise to tighten).

Tools Needed
No. 2 Phillips screwdriver, pliers

Handle Replacement Kit Instructions
1   To remove handle, loosen nut (inside tank). It is reverse thread. Pliers may be needed. Guide handle through opening to completely remove.
2   Place black spacer on bushing. Orient and insert as shown. If bushing does not fit, remove the black spacer and re-insert bushing.
3   Hand tighten nut snug around bushing (counter-clockwise).
4   Orient new handle in same direction as original. Insert until stem extends past bushing, as shown. You will hear/feel it click into place.
5   Gently remove disposable cap from barrel end of cable and discard.
6   Lift lever and push barrel end of cable up through hole on underside of frame until it clicks into place.
7   Guide cable end into lever slot.
8   Raise lever to seat white barrel into catch (you will hear it click).

Continue →

Handle Replacement Kit Instructions
9   Position the frame and lever with cable facing the front of the toilet tank (rest cassette on side of tank). Secure with (4) screws.
10   Match handle icon (circled) on cassette to direction of actual handle, and lift handle to horizontal position.

13   To begin lever alignment, hold actuator in place and loosen (but do not remove) set screw.
14   Adjust actuator height. Turn UP (counter-clockwise) or DOWN (clockwise) to align lever and frame (see step 15).

11   Maintain alignment of cassette, and guide it down over protruding stem until it clicks into place. (Protruding stem is shown in step 4.)

12   Gently push handle to test movement. If it doesn't move properly, parts may be installed in the wrong orientation and you should verify that steps 2, 4, and 10 were completed correctly.
15   Proper alignment of lever and frame is shown above.
16   Once properly aligned, hold actuator in place and tighten set screw to secure. Place toilet lid on toilet tank.

Installation complete

Common Adjustments

Most troubleshooting issues can be resolved by common system adjustments of either the cartridge or the actuator.

Please review the following pages for step-by-step instructions.
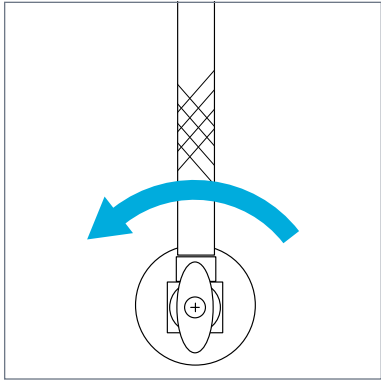

Actuator Adjustments
1 Hold actuator in place. Use 4-in-1 tool to loosen set screw by turning counter-clockwise, approximately 4 rotations. Do not remove set screw.

2 Adjust actuator UP (counter-clockwise) if there is too much travel in push button, or if toilet does not flush completely. Adjust actuator DOWN (clockwise) if there is not enough travel in push button, or if toilet runs for more than 1 minute.

Adjustment complete
Cartridge Adjustments

1 Make sure water supply stop is completely OPEN.

2 Hold actuator in place. Use 4-in-1 tool to loosen set screw by turning counter-clockwise, approximately 4 rotations. Do not remove set screw. Toilet may flush during this step.
**3** Unscrew and remove actuator. Set aside to reinstall. Leave set screw in place.

4 Use end of 3-in-1 wrench to turn flush valve cartridge counter-clockwise until only 1 black thread of the vessel is showing.
5 After you complete raising the flush valve cartridge, confirm only 1 black thread of the vessel is showing.

6 Turn flush valve cartridge clockwise ¼ turn. Listen for the water to stop running. If necessary, continue making ¼ turns, waiting 30 seconds between each turn, until water stops running.

7 Flush toilet twice, waiting 1 minute between flushes to test. Does the water stop running?

YES → Continue to step 8
NO → Repeat steps 4-7
8 Reinstall actuator. After 2 unsuccessful attempts, contact Flushmate at 800.533.3460.
